SOFTWARE ENGINEER SUMMARY

Engineering Manager with 10+ years in software engineering and a specialization in Application Security. Leads crossfunctional teams where delivery speed and security are treated as the same goal, having led frontend, mobile, backend, and QA squads in fintech, edtech, and enterprise environments. Track record includes reducing incidents by 80%, achieving 100% LGPD compliance, and embedding DevSecOps practices into teams with no prior security culture. Able to read a threat model and write the fix, translating security risk into business language for executives and into actionable tasks for engineers.

CORE SKILLS & TECHNOLOGIES

Application & Security Engineering: Application Security, Secure SDLC, Threat Modeling (STRIDE/DREAD), Security Risk Assessment, Vulnerability Management & Remediation, SAST/DAST, Secure Code Review, Security Automation, Python, Gitleaks, Semgrep, OWASP ZAP

Security & Engineering Leadership: Security Leadership, Engineering Management, Technical Leadership, People Management, Security Strategy, Cross-Functional Leadership, Mentoring & Coaching, Stakeholder Management

Security Architecture & DevSecOps: Security-by-Design, CI/CD Security, Security Gates, CIS Controls, Secrets Management, Software Architecture, Cloud (AWS/Azure), Observability

EMPLOYMENT & EXPERIENCE

Engineer Security Manager (Hybrid) — Trinca

Dec 2025 – Present

Currently Cybersecurity Engineer manager at TRINCA, leading engineering for FairFax across engineering, AI, and cybersecurity domains.

- **Built the engineering AppSec program from the ground up**, implementing Trivy, Semgrep, OWASP ZAP, Gitleaks, DefectDojo, and Wazuh; a TCO analysis against Aikido reduced projected licensing costs by **30%**.
- Led **vulnerability management and remediation**, continuously prioritizing critical and high-severity security findings across mission-critical products.
- Designed a **secure code-review pipeline** integrating secret detection (Gitleaks), code quality analysis (SonarQube), and DAST (OWASP ZAP), embedding automated **security gates into CI/CD and the Secure SDLC**.
- Conducted **security and privacy risk assessments**, process reviews, and data-protection reporting under LGPD within the insurance sector.
- Mitigated sensitive-data exposure through **data-masking strategies**, strengthening privacy and **secure-by-design** practices across analytics workflows.
- Implemented **CIS Controls hardening**, software disaster-recovery planning, and **STRIDE/DREAD threat modeling** to identify and mitigate security risks early in the software lifecycle.
- Led and mentored a **25-person cross-functional engineering organization** (4 Tech Leads, 5 QAs, 11 Software Engineers, 2 DevOps, 1 DBA) across **7 squads and 9 products**, accountable for engineering quality, security, delivery, and professional development.
- Provided **technical and security leadership** for the Fairfax Technical Core, supporting strategic decision-making across software engineering, architecture, AI, and cybersecurity.
- Managed the **full SDLC from planning through delivery**, partnering with Product and business stakeholders to balance engineering efficiency, software quality, security, and business priorities.

Tools & Methodologies: Trivy, Semgrep, OWASP ZAP, Gitleaks, DefectDojo, Wazuh, Aikido, SonarQube, KQL, MS Sentinel, MS Defender, Grafana

Application Security Specialist (remote) — Freelancer

Apr 2024 – Present

Provided Application Security consulting services to software teams, helping identify and mitigate security risks through threat modeling, automated security testing, vulnerability management, and secure development practices.

- Conducted **threat modeling** using **STRIDE** and **DREAD**, including full application decomposition and security risk assessment.
- Implemented **SAST**, **DAST**, and **secret-scanning pipelines** using **Aikido**, **Rainforest**, **Python**, **Gitleaks**, and **TruffleHog**, including security automation
- Delivered vulnerability reports for executives and engineering teams and conducted secure-development training, workshops, and talks.

Tools & Methodologies: *STRIDE and DREAD, SAST/DAST, Aikido, Rainforest, Python, Gitleaks, TruffleHog*

Tech Lead (On-site) — CRMBonus

Apr 2024 – Nov 2025

A technology company specializing in customer engagement and digital rewards, with Vale Bônus providing a digital benefits ecosystem connecting major brands, partners, and consumers.

- Acted as a Security Champion, driving secure development practices across frontend, backend, mobile, and QA squads and promoting **cybersecurity awareness** and **security-by-design** across engineering teams.
- Defined and promoted **secure engineering standards** across **architecture**, **microservices**, **automated testing**, **CI/CD**, and **observability**, while developing **security automation** and **vulnerability reports** for engineering teams and executives.
- Mentored engineers through **1:1s**, continuous feedback, and career development, while driving proactive **engineering improvements** that contributed to an 80% reduction in frontend incidents.

Tools & Methodologies: *Secure SDLC, CI/CD, Microservices, Datadog, Security Automation, Vulnerability Management, Secure Development*

Engineer Lead (remote) — Porto

Aug 2022 – Mar 2024

One of Brazil's largest insurance and financial services groups, operating at nationwide scale across insurance, banking, healthcare, mobility, and services, with a broad digital ecosystem serving millions of customers.

- Led the **frontend engineering chapter** for the Sales Hub, supporting multiple squads and defining engineering standards, architecture, development processes, and technical documentation.
- Drove **secure and scalable frontend architecture** using **React** and **Adobe Experience Manager (AEM)**, establishing best practices across automated testing, CI/CD, code quality, and software delivery.
- Improved application reliability and operational visibility through **monitoring and observability** with **Dynatrace**, while partnering with stakeholders on roadmap execution and technical decisions.
- Mentored engineers through **1:1s**, **continuous feedback**, and **career development**, promoting engineering quality, secure development, and knowledge sharing across teams.

Tools & Methodologies: *React, Adobe Experience Manager (AEM), Dynatrace, Secure Development, Software Architecture, Automated Testing, CI/CD, Observability, Engineering Leadership*

Frontend Staff Engineer (remote) — Árvore

Apr 2022 – Aug 2022

An EdTech company providing digital reading and learning solutions for thousands of students.

- Developed scalable frontend solutions and improved **code quality and maintainability**, contributing to a **20% reduction in bug reports**.
- Led **accessibility initiatives** aligned with WCAG standards.

Tools & Methodologies: *Frontend Engineering, WCAG, Accessibility, Code Quality*

Tech Manager (On-Site) — BeCapital

Dec 2021 – May 2022

A FinTech company focused on digital investment platforms and financial technology solutions.

- Managed engineering teams and consulting engagements, overseeing **technical delivery** and scalable frontend solutions
- Established **secure coding and SDLC practices**, achieving **100% LGPD compliance**, while mentoring and developing engineers.

Tools & Methodologies: Secure SDLC, Secure Coding, LGPD, Engineering Management

Senior Software Engineer (On-Site) — BeCapital

Jun 2021 – Dec 2021

A FinTech company focused on digital investment platforms and financial technology solutions.

- Designed software architecture and features for **investment platforms and CRM solutions**, while supporting AWS, Azure, and application databases.
- Introduced **automation, unit testing, and secure coding practices** to improve software reliability.

Tools & Methodologies: AWS, Azure, Power Automate, PowerApps, Unit Testing, Secure Coding

Full Stack Developer (Hybrid) — Stone Co.

Sep 2020 – Apr 2021

A Brazilian FinTech and payments company providing financial and technology solutions for businesses.

- Developed and maintained **business-critical logistics systems**, contributing to web/mobile architecture, unit testing, UX/UI, and accessibility.

Tools & Methodologies: Full-Stack Development, Mobile Development, Unit Testing, Software Architecture, Accessibility

Mobile Developer (On-Site) — Target Bank

Jun 2020 – Aug 2021

A FinTech company providing digital payment and banking solutions.

- Migrated the Target Conta Digital application from native Android/Java to Flutter, while contributing to mobile architecture, UX/UI, and accessibility.

Tools & Methodologies: Flutter, Java, Android, Mobile Architecture, Accessibility

Full Stack Developer (On-Site) — Tv Escola

May 2017 – Jun 2020

A Brazilian educational broadcasting organization focused on educational media and television services.

- Developed and supported closed-caption and television engineering systems, contributing to architecture, technical documentation, and WCAG accessibility initiatives.

Tools & Methodologies: Full-Stack Development, Software Architecture, WCAG, Accessibility

Jr. DevOps Engineer (On-Site) — Tv Escola

Oct 2014 – May 2017

A Brazilian educational broadcasting organization focused on educational media and television services.

- Managed Linux and Microsoft infrastructure, virtualization, high-availability broadcasting services, monitoring, cloud backups, and network compliance.

Tools & Methodologies: Linux, Azure, Active Directory, AWS, Docker, VMware, Hyper-V, Zabbix

EDUCATION

Faculdade Metropolitana

Postgraduate Specialization, Cybersecurity

São Paulo, SP

2025 - 2026

Faculdade Metropolitana

Postgraduate Specialization, Software Engineering

São Paulo, SP

2026 - 2026

Universidade Estácio de Sá

Associate Degree, System Analysis, Information Technology

São Paulo, SP

2025 - 2026
